ZMERLY
SMART ENERGY

Setting the Standard ... For your Comfort

2023

Dear business partner

ZMERLY & CO was founded in 2007, but the actual roots are arising from our experience in the field that go back to 1995.

From its first days, **ZMERLY & CO** aimed to provide our market with the latest technologies in the heating and solar energy field, to bring the highest knowledge to engineers and stakeholders, and to have the complete systems and services that lead to our customer satisfaction.

"Setting the standard for your comfort" is our mission statement, looking to help our customers to have the best system, that saves energy, easy to use and to maintain, have long lasting quality, and provides the maximum user comfort .

Last year, we achieved a big step in our company's growth. We have moved to our new office building of 1200 sqm in **TRIPOLI**, which includes warehouse and logistics, engineering and sales offices, interactive showroom and training center for engineers, students and installers. Our team was also expanded to meet our market demand.

Another leap this year was the opening of our new branch in **BEIRUT** with 110sqm offices and showroom. From this place we aim to better serve our client and to be in the heart of the market.

Our sister company **WIKAYA** sarl, responsible for the after sales services, had also shown a good push, by supporting the team with expert people for maintenance, and by enhancing the follow up and visits system.

To implement our mission statement on ourselves, our new office building is heated by mean of solar energy, using Under Floor heating and low temperature radiators, solar thermal panels, and stratified storage tank, with a smart weather-compensated heating controller. Thus, we expect to have a reduced heating bill by around 75 %.

A solar power system will also supply our facilities completely by a free green electricity.

All of this, represents the continuation of progress which began **15 years** ago. We are honored and pleased that the circle of our business partners is constantly expanding. We are proud that we have achieved a higher level of business excellence and that we are trusted by the largest and most reputable consulting and contracting offices in the field.

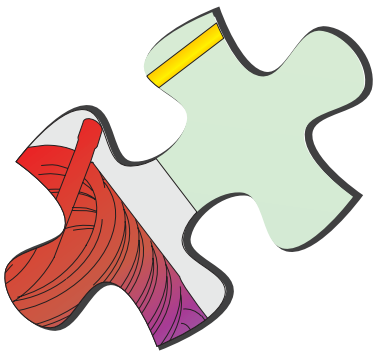

We kindly invite you to browse through our catalogue and see how our solutions and products can meet your needs. We aim to work with new ambitious business partners with a recognizable vision, and to provide modern and efficient solutions to save energy and benefit their projects.

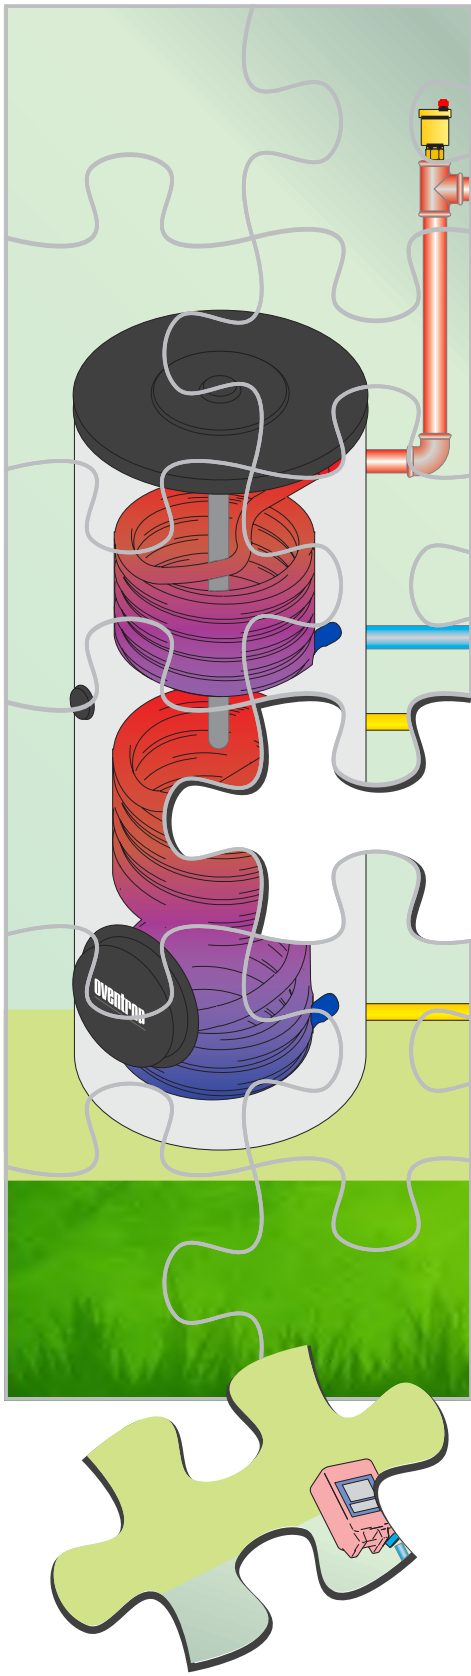

Our Solutions

ZMERLY & CO is always on the top, following the newest technologies and systems in its field.
"**Setting the standard ... for your Comfort**" is not just a slogan, it is our way of serving our market and clients.
Our competence is focused in the following trades:

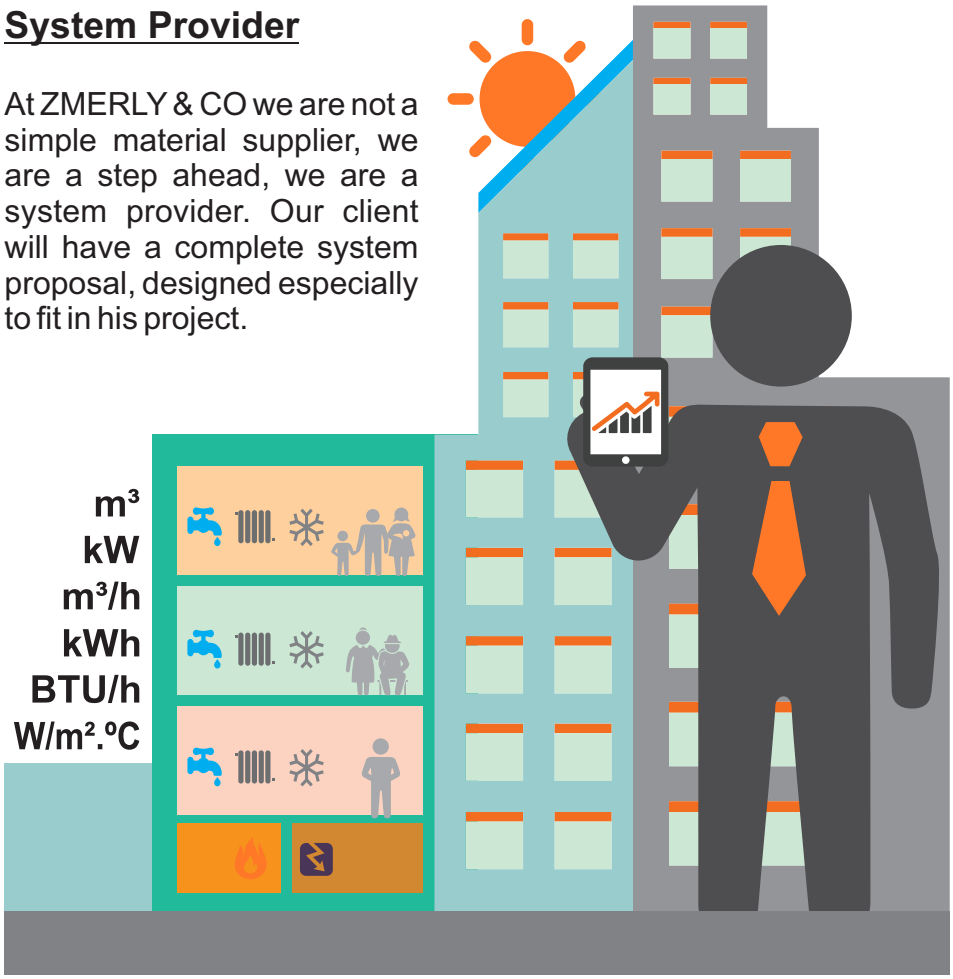

- Heating technology
- Boiler room
- Heating system components
- Piping for Heating & Water distribution
- Under Floor Heating
- Heating Control
- Heating water treatment
- Solar Energy
- Geothermal Energy
- Sewage Treatment and lift stations
- Central Vacuum

System Provider

At ZMERLY & CO we are not a simple material supplier, we are a step ahead, we are a system provider. Our client will have a complete system proposal, designed especially to fit in his project.

Our Products

Our products & brands are chosen carefully to fulfill our standard and to push our market a step ahead towards perfection. Our proven innovative technologies and systems are key values of ZMERLY & CO, which ensures clients with high standard products and services.

Greater efficiency and reduction of pollutants are trademark characteristics for all our products

ZMERLY & CO product portfolio includes:

BOILERS - BOILER CONNECTION SYSTEM

PANEL RADIATORS - RADIATOR VALVES - FLOOR HEATING

HOT WATER TANKS - HOT WATER PREPARATION - HEAT STORAGE TANKS

HEATING CONTROL - THERMOSTATS - SMART ROOM THERMOSTAT

SOLAR ENERGY - HEAT PUMPS - GEOTHERMAL ENERGY - CENTRAL VACUUM

VALVES - CONTROL VALVE - PRESSURE REDUCING VALVES

CHEMICALS FOR HEATING WATER - AIR AND DIRT SEPARATORS - FILTERS

WATER TREATMENT - SEWAGE TREATMENT - PUMPS - LIFT STATIONS

ANAEROBIC PIPE SEALANT - PIPES AND FITTINGS - INSULATION

Technical support

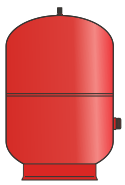

As a partner of our customers, we put on in the discussion long before we know how the system looks like. We will accompany you at all stages of the project from conception of your components and systems to the installation stage. During the entire term of your project, we are your reliable partner for fast service and technical advancement.
Accurate design is an essential foundation and our engineers utilize market leading software and expertise to calculate and design heating system, to ensure that the equipment supplied will match all the requirements of your property.
You are **Home Owner, Consultant, Contractor, Architect, or installer**, our engineers will assist you in finding quality system that meets your expectations, where all the small and big details are respected.

The right choice

There is lots of ways to heat a building; between oil and gas heating, wood or solar, conventional or condensing boiler, radiators or floor heating, Heat pump or pellet boiler, there are plenty of choices.

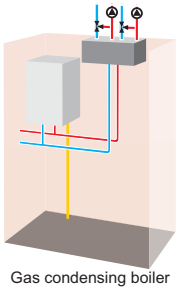

It's about your comfort! Take the right choice

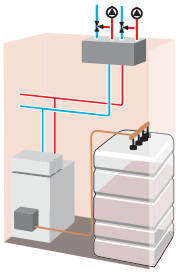

What can be the right choice?
it is not limited to the thermal comfort only, the right choice can be measure by the four following essential points:

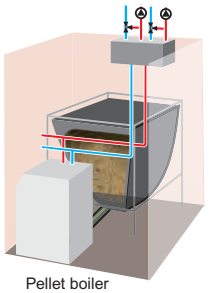

- The energy consumption, equipment must be selected for maximum efficiency .
- The heat source respect the environment and protect our future.
- Reliability and durability, your investment must be durable.
- A tailor made system, your heating system must be perfectly adapted for your home, your environment, your habits, and your comfort needs.

Radiators

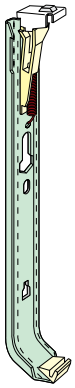

Radiators are the interface of heating system with the user.
Size is determined by the heating load calculation of the intended room, while positioning and aesthetic are constraint by the customers taste.
Steel Panel radiators offer the flexibility of more than 2000 sizes, and an exquisite finish and surface.
Ranging from profile, flat, premium, steel panel radiators are the core of decorative heating elements, combining high output with balanced Radiation Convection rate, and offering Efficient, Economic heating.

Boiler Room

This space in the building dedicated to the mechanical equipment and its associated electrical equipment is ZMERLY's field of expertise. A lot of research, design, products, and technologies are invested to meet our concept for the core of the heating plant.
Our **OVENTROP REGUMAT modular system for Boiler room**, offer an intelligent complete system for all components which are required for the connection of boilers, pumps, mixing valves and pipework. That allows ease of installation and maintenance, and ensures the lowest heat loss from your installation.
Advantages:

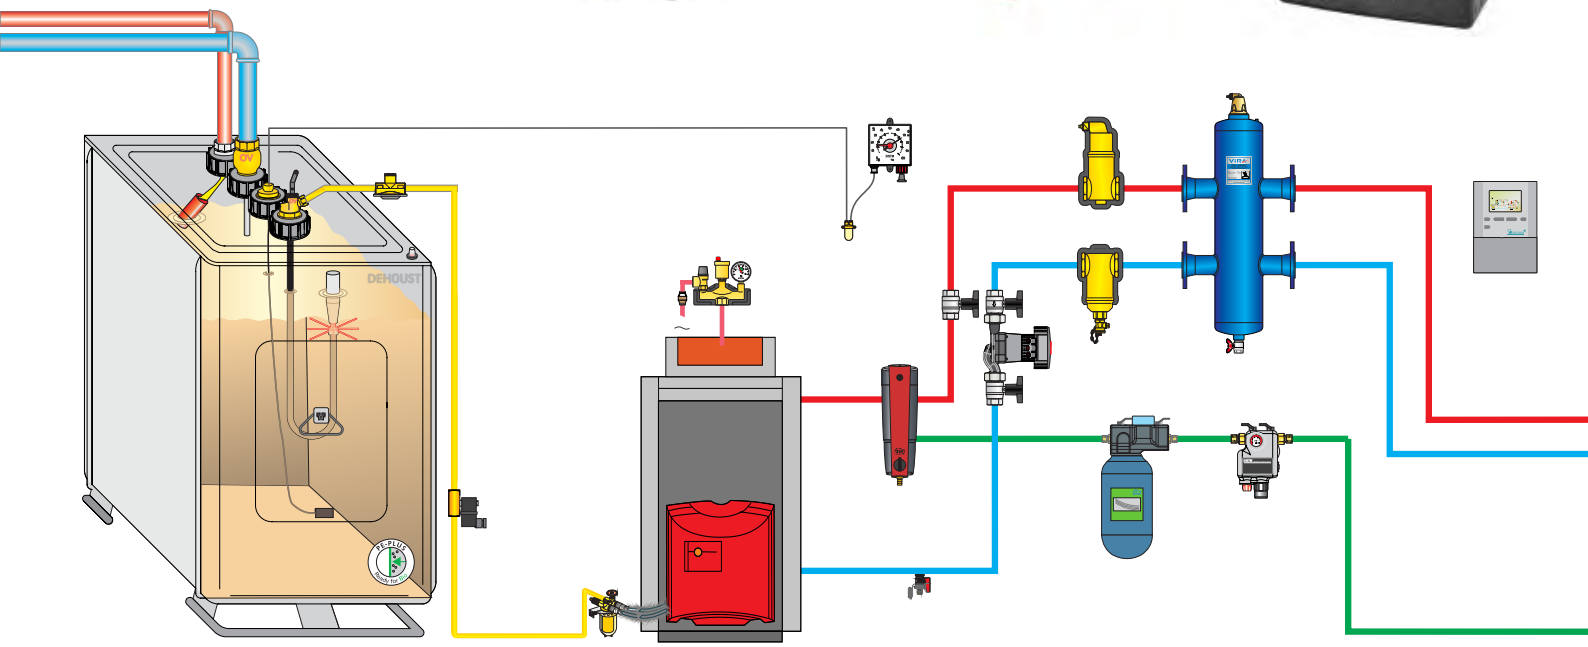

- Universal thermal insulation for standard and high efficiency pumps
- Supply and return pipe can be changed on site
- High functional efficiency
- All components from one supplier
- Complete systems available
- High quality materials
- Time-saving installation
- Technics for easy installation and maintenance
- Insulation serves as packaging and protection during transport

Floor Heating

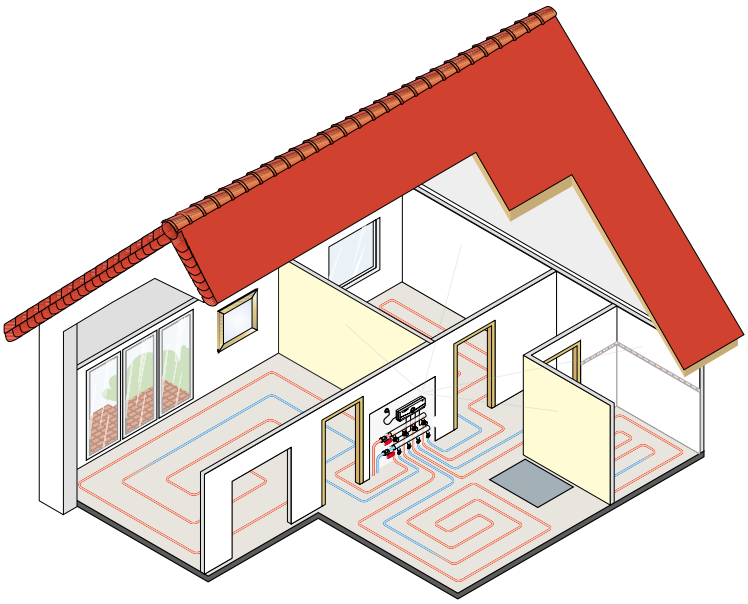

The times when energy is wasted carelessly are over. Nowadays, the maxims are **Save Energy** and **avoid emissions**. This is why the surface heating and the surface cooling are becoming more and more important when choosing the heating/cooling system for new buildings as well as for renovation projects. **Comfortable, economical, environmentally friendly, efficient** and **low operating cost**. Under floor heating is about **uniform heat distribution**, providing **more comfort** due to **big radiant area, healthy** and **safe** heating with **absence of air draughts**.

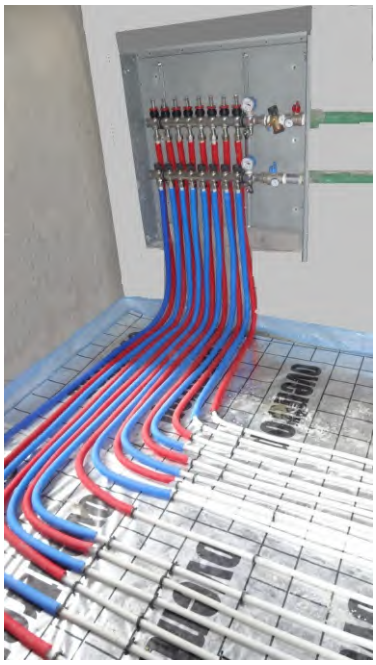

Additionally the system is **space saving**, with more **flexibility** and **freedom** for **interior design**, **no exposed radiators or pipes**, and can be used to **distribute heat evenly**, especially in **large open areas.**
Zmerly & Co provides solutions for water based under floor heating for new and renovating homes, residential, commercial and industrial buildings.
Our under floor heating systems are available for a variety of floor surfaces, including tile, stone, carpet & hardwood.

Solar Energy

Nowadays, the necessity for production and saving energy without polluting the environment has become common knowledge. Although every case has its own particularities, we firmly believe that it is an investment which is amortized in a period of 3-5 years and has an average lifetime of more than 20 years. Solar power can be used to generate electricity, to heat domestic water, pool, Jacuzzi, heating coil, radiators and floor heating.

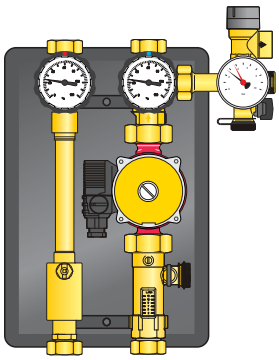

The individual thermosiphonic heater in an eco-proposal and effective energy saving solution that combines high performance, autonomy, simple installation and cost effectiveness. They are ideal for the generation of domestic hot water (around 80% coverage).

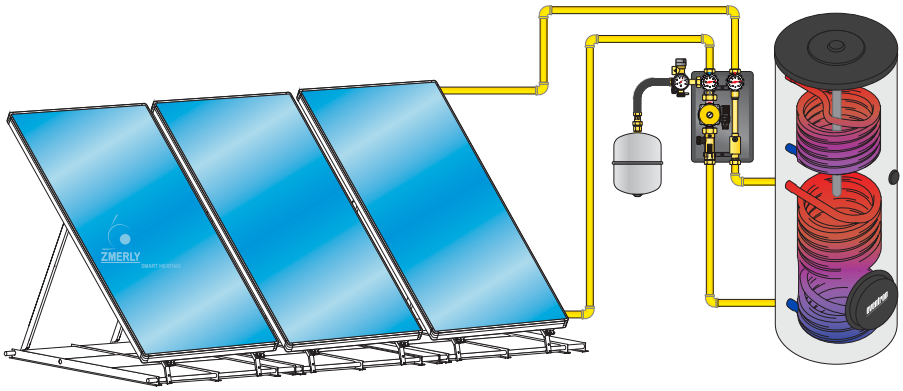

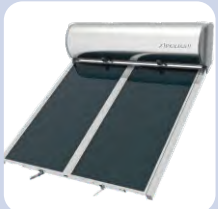

The forced circulation solar systems are designed and developed for installations where there is big demand in hot water (complexes, hospitals, sport facilities, hotels etc) and domestic use, in case the water storage tank cannot be placed above the collector due to static or aesthetics reasons.
They are highly aesthetic systems, which can be simply and quickly installed to blend with the traditional or modern architecture of a building, providing free hot water almost the whole year round. Even in regions with low sunlight they achieve the preheating of the water, which contributes to a drastically reduced consumption of conventional energy.

Vacuum Tube

Expansion Tank

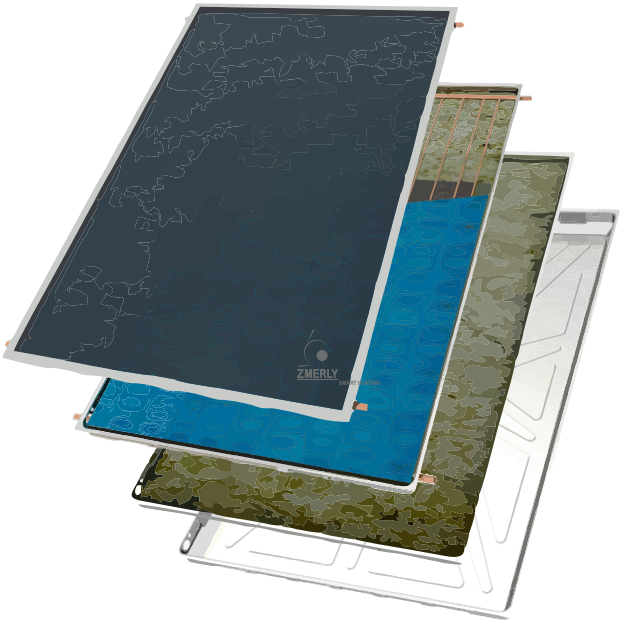

Solar kit

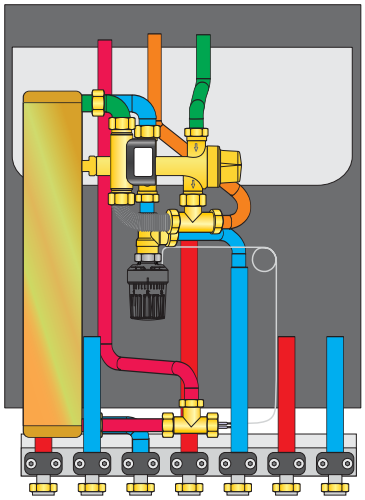

S.S. Twin pipe

A reliable solar system cannot be achieved unless we take into consideration all the small details. Starting from the adequate design, and ending with correct installation, testing and commissioning process. our success in solar installations is based on:

- Well Engineered design
- High efficiency solar collectors
- Long lasting hot water tanks
- Optimal accessories and equipment
- Smart solar controller
- Special pipes for solar connection
- Support of our European partners
- Using the latest German technologies
- Well trained installers.

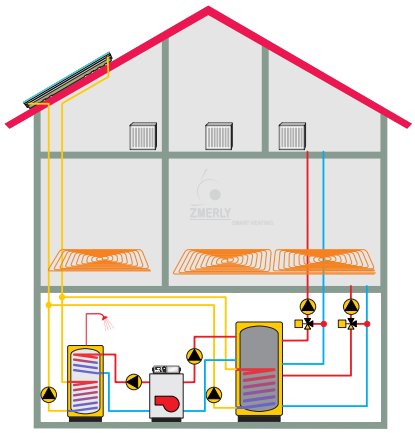

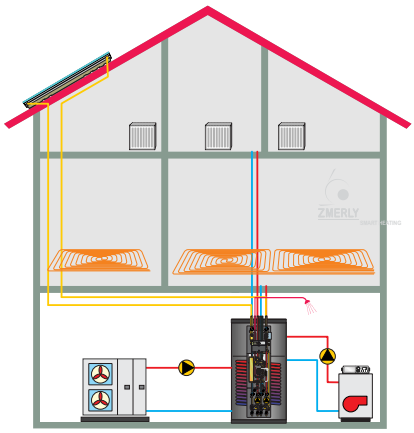

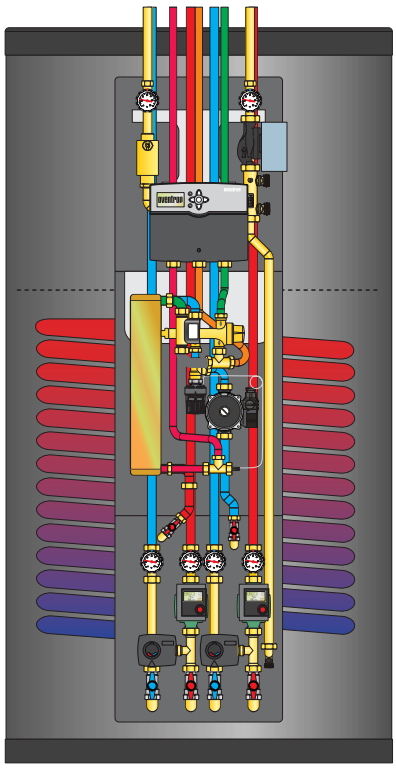

Solar Space heating

The heat generated by a solar-thermal system can also be used to assist the space-heating system (as well as produce hot water). Collector surface areas need to be 2 – 3 times larger. Fuel savings of 30 % – 50 % can be achieved, depending on the building insulation.

Heating Control

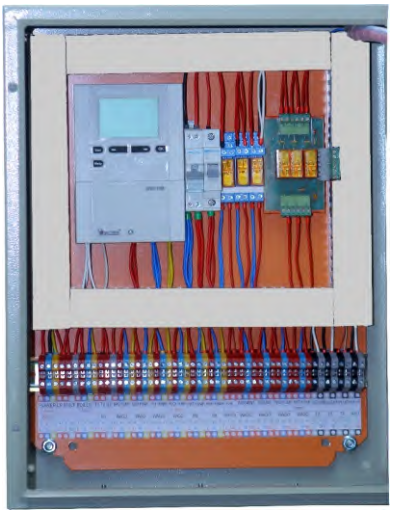

A heating control system is designed to keep the temperature at your preferred setting no matter what the outdoor conditions are like. By intelligently adjusting the heating system operation to compensate for indoor and outdoor temperature changes, temperature swings are eliminated. It makes your heating system more efficient to provide you significant savings on your bills and an optimum level of comfort.

The outdoor Temperature Reset with Indoor Temperature Feedback improves the quality of today's high efficiency boiler to ensure operation at the lowest possible temperature for the longest required cycle, maximizing performance.

The outdoor Temperature Reset with Indoor Temperature Feedback improves the quality of today's high efficiency boiler to ensure operation at the lowest possible temperature for the longest required cycle, maximizing performance.

- Room Temperature control
- Outdoor Reset
- Low Temperature Heating
- Under Floor Heating
- Safety temperature limit
- Cascade Boilers
- Proximity control
- Zoning
- Comfort optimization
- Domestic Hot Water
- Solar Water Heating
- Heat Pump
- Swimming Pool control
- PWM pump control
- Solid Fuel Boiler integration

The Controller is your system brain, let it be smart

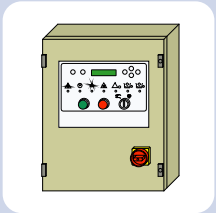

Smart room thermostat

The smart home has arrived, the internet is gradually making its way into everything from appliances to thermostats, and people are now able to control most things in their house from the phone.
Heating Controllers are also smart. Not only the room temperature, but all your heating system equipment as boiler, heating zones, under floor heating, hot water production, solar energy and other parts are all now in your hand. You can control, monitor, change the settings, and get notifications for any fault or problem that happen in the Heating system in your house.
Heating professionals and installers are also able to access their client Controllers and manage the settings, make prevention, and serve the client

Heating Water quality

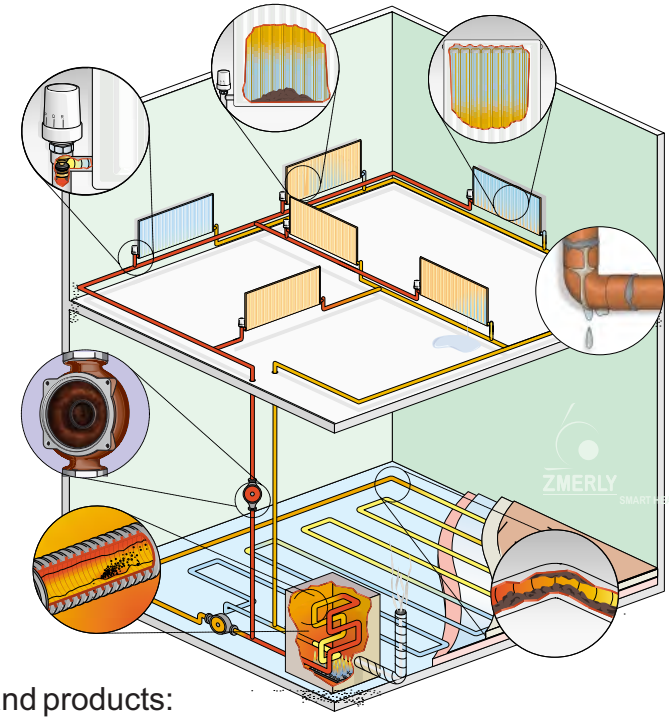

Water is an essential element in the operation of central heating systems. It conveys heat from the boiler to all heat emitters. it is very important to take care of the quality of water inside your heating system, which is the cause of many problems in case it is neglected.
The heating system operation is subject to difficult conditions in terms of water temperature and pressure. The water circulates back and forth from the Boiler to the radiators many times every day.
In its trip to all parts of the heating system, water carries dirt and sediment from one place to another. Which expose them to pollution and to carry impurities and solid bodies, which in turn may lead to obstruction of circulation or even damage the heating equipment, boiler, pumps, pipes, valves and radiators, which are all sensitive to the bad circulating water.

- **Air** in the water: blocks the circulation in the system or in part of it, and creates corrosion.
- **Black Sludge**: reduces the circulation and makes cold spot in the radiators.
- **Algae in UFH**: reduces the flow and block some loops.
- **Debris**: increases the friction and makes noise at the pumps.
- **Lime scale**: reduces the efficiency of the system, increases the emission, and makes boiler noise.

Fill your heating installation properly

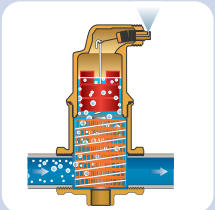

Resin tank, newly filled | Resin tank, in operation | Resin tank, exhausted

To protect your system, we provide several procedures and products:

- **Air Separator**: removes the micro-bubles from the water, protects against corrosion.
- **Dirt Separator**: reduces the debris and sludge.
- **Heating Filter**: plays the role of air and dirt separator at the same time, removes the magnetite.
- **Softener for heating water filling**: works on the water Hardness, the PH value, and the electrical conductivity of the water, which protects against lime scale and corrosion.
- **Chemicals**: for flushing, de-blocking and Mud removal.
- **Inhibitor**: protects the system by creating a microfilm on all the internal surfaces.
- **Anti algae**: for low temperature systems like Under Floor Heating, protect against algae formation.
- **Polyphosphate doser**: protection against lime scale.

Heat pump and Geothermal Energy

Heat pumps are mostly electrically powered. They harvest the low-level heat energy in the earth or the environment to provide space heating. It is not only a clean energy source, but also it can lead to an energy saving of up to 85%. A heat pump with a performance factor of 4.0 generates 4 kWh of heat from one kWh of drive power. It works more efficiently when combined with systems that works at lower temperatures. It is mainly used for:

- Space heating, in conjunction with solar or with boiler.
- Domestic hot water heating.
- Space heating and domestic hot water.
- Swimming pool heating.

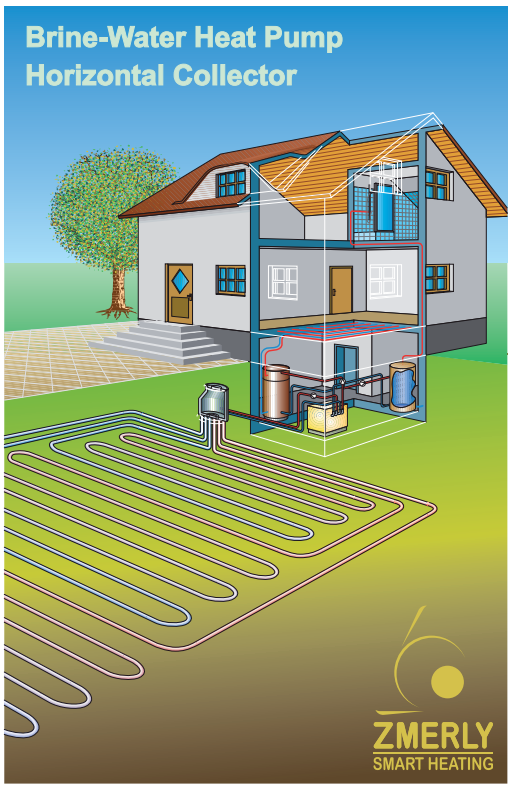

The higher the temperature of the heat source, the more efficiently the heat pump will operate.
Three main types of Heat Pumps are available:

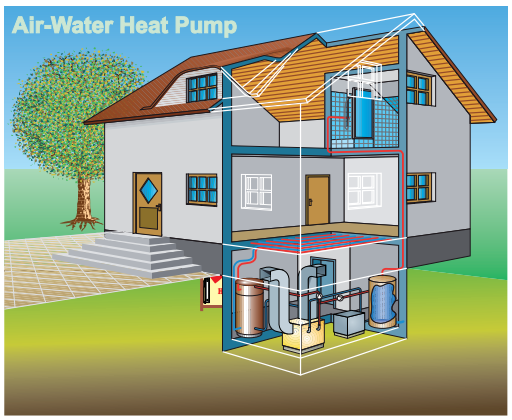

- The Air/water type
- The Water/Water type
- The Ground/Water type

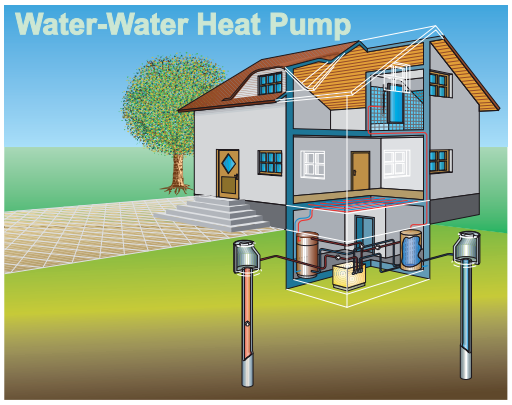

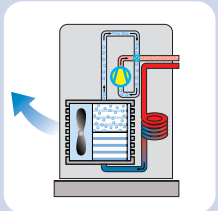

The heat pump is a clean technology that protects our energy resources and the climate at the same time

Waste Water Treatment

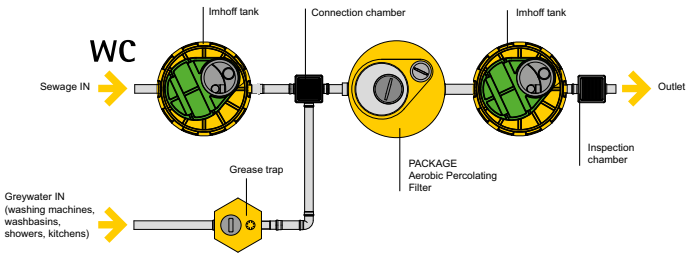

From the concept through design, sizing and installation, to maintenance, our engineering department offers you a complete solution for waste water treatment. Made by **REDI,** the specialized Italian company in the field of drainage system, a “turnkey” solution, is provided to take care of the project, materials, assembly and testing.
Grown with this experience, **REDI** has developed two types of highly efficient installations, intended for effluents treatment based on the concept of activated sludge system.

- Standard modules of rotomoulded polyethylene for single habitats and small residential complexes (up to 300 EH).
- Tailor made installations, intended for wastewater treatment from medium size agglomerations (from 300 to 3000 EH).

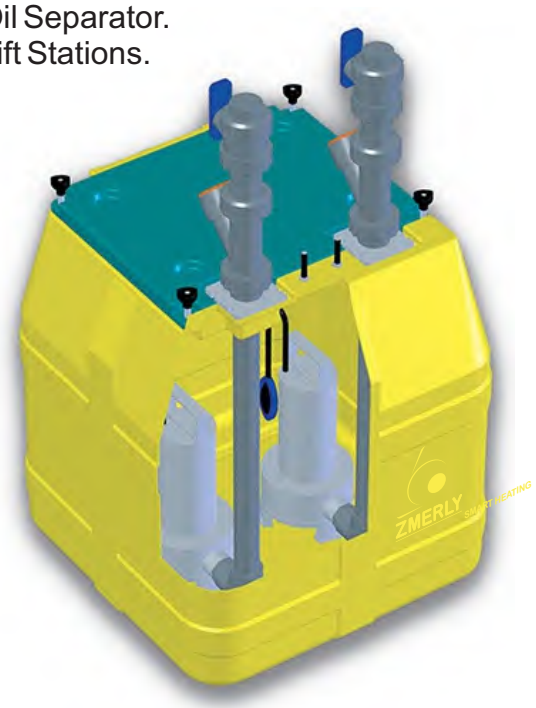

Our systems are installed in several types of buildings and applications as houses, residential buildings, hotels, resorts, campsites, marina, restaurants, fast-food, wineries, dairies, food industries, car wash, car demolishers, workshops, airports, ports, logistics areas, petrol stations, power plants, refineries, agri-food industries and others.
The systems offered are:

- Waste Water: Pretreatment plants.
- Waste Water: Secondary treatment .
- Waste Water: Tertiary treatment .
- Activated sludge system.
- Septic Tanks.
- Rain Water Harvesting.
- Grease Trap.
- Oil Separator.
- Lift Stations.

Central Vacuum

Central vacuum is a revolutionary system, as simple as it is effective in the environments where it is installed, it stops the recirculation of dust, microdust, bacteria and mites for good; this system improves the quality of the air, drastically reducing the sources of possible allergies.
Providing **maximum hygiene, quick cleaning, esthetical appearance, silent, safe use, low maintenance and long lasting product,** central vacuum systems are among the **best indoor air quality** investments for your home. We can provide vacuum units with various power ranges and characteristics to suit the type of buidings where they will be used.

ZMERLY
HEATING ACADEMY

Dedicated Educators are lifelong learners

With that in mind, ZMERLY & Co. launched her new training center, which provides training for Engineers, Architects, students, plumbers, and whoever is interested in heating technology.

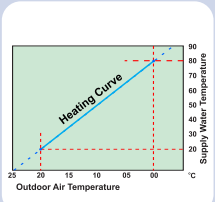

Our Interactive Training Center is equipped with the highest technology heating devices and systems that enable trainees to experience the items and be in direct contact with them.

After Sales Services

Our technical team will provide support answering any questions you may have, aiming to ensure that the end result is a heating system which is un-equall in terms of performance, control of the quality of its components.
Our sister company **WIKAYA,** was established to serve our client in the best way. It provides after sales services for your entire heating system, your Gas or Fuel Boiler, Burner calibration, Heating Circuit components, Under Floor Heating, Solar Energy, Heating Control and other related trades.

Get the Best Performance From Your System

Give your equipment longer life, and keep it working in the best comfortable, economic and ecologic way.

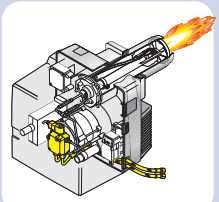

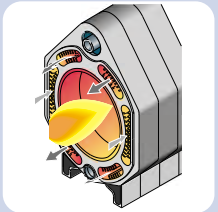

If that sounds like the complete solution to all your heating needs then do
